Schematic diagram

Dimensions of the HUB-GM200 in mm

Technical data

Data	Values
Power supply	24 V DC ± 10 %
Max. power consumption	120 W
Processor	Colibri IMX7D 1 GB 32 bit, 2× ARM Cortex-A7 CPU ARM®, 1× Cortex-M4 CPU Core®
Memory	1 GB DDR3L RAM, 4 GB eMMC
Data interfaces	USB1: Host (Micro USB) USB2: Device (USB-A) USB3: Device (USB-A) 2× Ethernet: 100 Mbit/s 1× CAN 1× RS485 3× status LEDs Backplane bus
Connections for peripheral devices	6× digital input 6× digital output 4× analogue input
Protocols	OPC UA server + client MQTT broker server + client Modbus TCP/IP broker client + server
Operating system	SIINEOS IIoT operating system for configuration and data visualization (via Micro-USB or Ethernet)
Housing	Plastic (polyamide), black, flammability class UL 94 VO
Protection class	IP20
Dimensions	139 mm × 100 mm × 25 mm
Weight	181 g

Ambient conditions	Values
Temperature range	Storage: -40°C to 85°C Operation: 0°C to 50°C
Humidity	Storage: 10% to 95% RH, non-condensing Operation: 20% to 90% RH, non-condensing
Operating altitude	Max. 2,000 m above sea level

Storage	Values
Recording interval	Minimum 1 second
Storage	Up to 4 GB usable
Data export	VictoriaMetrics

SIINEOS	
Pre-installed software	<p>FlexPlorer: Live data visualization</p> <p>Azure IoT Hub Connector: Connector to the Microsoft® IoT platform</p> <p>Cloud of Things Connector: Connector to the Telekom® IoT platform</p> <p>InGraf: Grafana data visualization</p> <p>NumCorder: Recording of scanned or entered barcodes / serial numbers</p> <p>OPC UA server: Counterpart to the OPC UA client, setting up of a server-client structure with one device</p> <p>NodeRED: Graphical programming of interfaces, services or hardware</p> <p>PromEx: Database configuration of VictoriaMetrics and Prometheus</p> <p>TOSIBOX®: Secure connectivity between the IoT devices</p>
I/O interfaces to third-party systems/devices	<p>S7 PLC client: Connector for the Siemens® S7 controller</p> <p>Sensirion SPS30: Temperature and humidity sensor</p> <p>TBEN-S1-8DIP: TBEN module from TURCK®</p> <p>TBEN-S2-4AI: TBEN module from TURCK®</p>

Specification of inputs and outputs

Configuration of DIO as a digital input	Values
Conformity	EN61131-2 Type 1/3
Switching threshold	Between 5 V and 11 V
Pull-down current	Typ. 2 mA
Bandwidth	From 6 Hz (with 12 channels, 2 edges) to 150 Hz (with 1 channel, 1 edge)*
Permissible input voltage range	-3 to 30 V
Circuit diagram**	

Configuration of DIO as a digital output	Values
Power supply	From 24 V
Conformity	EN61131-2 nominal current 0.1 A
Max. output current	Typ. 120 mA
Switching interval	≥ 50 ms*
Voltage drop to 24 V	Max. 1 V
Protective functions	Overload protection Reverse-current protection
Circuit diagram**	

Analogue input AI _N	Values
Operating modes	Current Voltage
Measuring range	0–11 V / 0–24 mA
Resolution	12 bit
Input resistance	101 k Ω (at 0–11 V)
Sampling interval	≥ 50 ms*

Analogue input AIN	Values
Permissible input voltage range	-3 to 30 V
Protective functions	Overload protection: in 20 mA mode, the current is limited to 22–30 mA
Circuit diagram**	<pre> graph LR AIN((AIN)) --> Diode[Diode] Diode --> Hash["#"] Hash --> R91[91kΩ] R91 --> R10[10kΩ] R10 --> Ground1(()) R91 --> R75[75Ω] R75 --> Ground2(()) R75 --> IMX[iMX] IMX --> ADC[iMX ADC] ADC --> 3V3[3V3] </pre>

*Only if processor is not busy

**The hash (#) in the circuit diagram indicates the overload protection.

USB interface specifications

USB connections	Values
Max. power consumption for USB1 (Micro-USB on the front)	5 W (1 A) May vary depending on the device connected: <ul style="list-style-type: none">• On a 24 V power supply, the power consumption is 0• On a 5 V power supply, the digital outputs cannot be used.
Max. power output for USB2 and USB3	2.5 W (500 mA) with 24 V supply
Support for	Full, high and low speed (480, 12 and 1.5 Mbit/s)
Circuit diagram*	<p>The circuit diagram illustrates the power and signal distribution. It starts with a 24V input source connected to ground through a diode. This 24V line powers a DCDC converter and an LDO. The LDO provides a 5V output, which powers the USB1 port (D+ and D-) and an iMX module. The 5V line also connects to an iMX module for the CAN bus. The 24V line connects to an iMX module for the RS485 bus. The DCDC converter provides power to an iMX module for the Backplane. Finally, the 24V line connects to an iMX module for the DIO. Protection diodes are placed at various junctions, and hash symbols (#) are used to denote overload protection points.</p>

*The hash (#) in the circuit diagram indicates the overload protection.

CAN interface specification

CAN (controller area network)	Values
Voltage output	24 V (0.75 A)
Max. baud rate	1 Mbit/s
Bus termination	120 Ω
Protective functions	Reverse-polarity protection Overload protection

RS485 interface specification

RS485	Values
Voltage output	24 V (0.75 A)
Max. baud rate	2.5 Mbit/s
Bus termination	120 Ω
Protective functions	Reverse-polarity protection Overload protection

Backplane bus specification

Backplane bus	Values
Voltage on the backplane bus	Voltage of the power supply unit minus 0.5 V
Communication	Via Modbus RTU
Max. number of extension modules if device acts as master gateway	3
Protective functions	Overload protection
